ABDULLAH ESLAM ABOELFTOH

Aspiring Cybersecurity Specialist & Enterprise Networking Graduate

Cairo, Egypt

+20 114 112 9679

abdoeslam2024@icloud.com

Professional Summary

Aspiring Cybersecurity Specialist and ICT graduate with comprehensive hands-on training in ethical hacking, enterprise networking (CCNA/CCNP), Linux and Windows administration, and cloud computing. Self-driven learner who independently acquired digital marketing, Meta Ads campaign management, and video editing and production skills. Actively seeking international scholarships, internships, and entry-level cybersecurity roles across Europe.

Education

WE School for Applied Technology

ICT Track — Cybersecurity & Network Engineering · Cairo, Egypt · Graduate, 2026

Technical Skills

CYBERSECURITY & NETWORKING

Ethical Hacking

Cybersecurity

CCNA / CCNP

Kali Linux

Linux Admin

Windows Admin

CLOUD, DEVELOPMENT & TOOLS

Cloud Computing

Python

HTML

Cisco Packet Tracer

AutoCAD

MS Word

MS Excel

DIGITAL MARKETING & CREATIVE

Digital Marketing

Meta Ads (Facebook/Instagram)

Video Editing & Montage

Content Production

Key Project

Enterprise Network Design & Implementation

Cisco Packet Tracer

- Designed a full-scale enterprise network: VLANs, OSPF, HSRP, EtherChannel, NAT, VPN, and Wireless LAN.
- Configured DHCP, ACLs, Syslog, NTP, and TFTP; produced complete technical documentation and troubleshooting reports.

Certifications & Training

CCNA & CCNP · Advanced Cybersecurity & Ethical Hacking · Kali Linux · Advanced System Administration

Cloud Computing · Python · HTML · AutoCAD · Digital Marketing & Meta Ads (self-taught) · Video Editing & Production (self-taught)

Soft Skills & Languages

Soft Skills

Leadership · Communication · Teamwork · Problem Solving · Public Speaking · Time Management

Languages

Arabic — Native · English — B2 (CEFR)

Additional Experience

Fiber Optics Industrial Training

Hands-on industrial training in fiber optic cable installation, splicing, and network infrastructure.

Community Volunteering Activities

Active participant in community service initiatives, demonstrating leadership, teamwork, and social responsibility.

Open to international relocation — Available for scholarships, internships & full-time roles across Europe

Personal Profile

Abdullah Eslam Abu Al-Futouh Abdul-Majeed is a dedicated third-year student of Networks and Information Security at WE Applied Technology School, Nasr City, Cairo. Over three years of intensive study, he has developed hands-on proficiency in enterprise networking, Cisco IOS configuration, cybersecurity fundamentals, cloud infrastructure, and IT systems management — equipping him with a skill set that is directly aligned with international industry standards.

He is seeking admission to an internationally recognised undergraduate or postgraduate programme in Computer Science, Network Engineering, or Information Systems at a European or CIS-region university, where he can deepen his technical expertise, engage in research, and contribute to a globally diverse academic community.

Key Personal Information

Full Name (Arabic)	عبدالله اسلام أبو الفتوح عبدالمجيد
Full Name (English)	Abdullah Eslam Abu Al-Futouh Abdul-Majeed
Nationality	Egyptian
Location	Nasr City / El-Matarya, Cairo, Arab Republic of Egypt
Institution	WE Applied Technology School — Nasr City Branch, Cairo
Programme	Networks and Information Security — Third Year (Final Year)
Graduation	2026
Language	Arabic (Native) · English (Professional Working Proficiency)
Email	abdoeslam2024@icloud.com

Professional Objective

To enrol in a rigorous international programme in Computer Science, Network Engineering, or Information Systems — building on proven practical experience in Cisco networking, cybersecurity, and cloud computing — while gaining immersion in global research culture and cross-disciplinary academic collaboration.

Academic Background

WE Applied Technology School

Institution	WE Applied Technology School
Branch	Nasr City, Cairo, Arab Republic of Egypt
Programme	Information Technology — Networks and Information Security Track
Duration	Three-Year Applied Technology Diploma (2023 – 2026)
Accreditation	Ministry of Education & Technical Education, Egypt
Year of Completion	2026 (Third and Final Year)

WE Applied Technology School is a specialised technical institution under the Egyptian Ministry of Education, offering applied diploma programmes aligned with international IT industry frameworks. The Networks and Information Security track covers Cisco Networking Academy content, Microsoft Azure cloud platforms, and modern cybersecurity principles — preparing graduates for both employment and advanced academic study.

Curriculum — Core Modules Completed

- **Unit 17 — Introduction to Cybersecurity:** CIA Triad principles, cyber threat landscape, malware taxonomy, attacker profiles (Black/Grey/White Hat), passive and active attack vectors, InfoSec fundamentals.
- **Unit 18 & 19 — Advanced Cybersecurity I & II:** OSI & TCP/IP models in depth, routing protocols, network structures and components, security threat mitigation, vulnerability assessment methodologies.
- **Unit 20 — VPN & Mikrotik:** Virtual Private Network architectures, IPsec (Transport & Tunnel modes), Mikrotik configuration, secure tunnelling protocols.
- **Unit 21 — Cloud & Virtualisation Technology:** Virtualisation concepts, cloud computing service models (IaaS/PaaS/SaaS), redundancy and high-availability architectures, business migration rationale.
- **Unit 22 & 23 — Microsoft Azure I & II:** Azure portal navigation, virtual machine provisioning across global regions, availability zones, VM sizing (general-purpose and GPU-optimised), cloud governance.
- **Unit 24 — Cisco DevNet:** Network programmability, APIs, routing protocol automation, cloud integration with Cisco platforms, introduction to network-as-code paradigms.
- **Routing & Switching (Practical):** OSPF dynamic routing, inter-VLAN routing, STP-PVST, EtherChannel, VTP, DHCP configuration, ACLs, NAT, Port Security, DHCP Snooping, ARP Inspection.
- **Cryptography & Security:** Symmetric / asymmetric encryption (AES, DES, RSA, Diffie-Hellman), digital signatures, hash functions (SHA/MD5), PKI, VPN encryption, access control lists, firewall design.

Technical Skills & Competencies

Networking & Infrastructure

Cybersecurity

Cloud & Systems

Professional Competencies

Analytical Problem-Solving	Technical Documentation	Team Collaboration
Cross-Cultural Communication	Self-Directed Learning	Attention to Detail
Network Design & Planning	IT Infrastructure Analysis	Adaptability

Featured Project: OnSite Enterprise Network

Project Title	OnSite Enterprise Branch Network — Final Year Practical Project
Technology	Cisco Packet Tracer (.pkt) — Multi-layer Enterprise Simulation
Protocols	OSPF Area 0, SSH, STP-PVST, NTP, Syslog, Service Password-Encryption
Topology	Multi-branch with centralised routing and WAN edge connectivity
Assessment	Practical Training Project — Evaluated by WE School Supervisor, 2026

Figure 1 — Enterprise network topology: HQ core/server block, distribution switches, and multi-branch WAN edge connectivity (Cisco Packet Tracer).

Implementation Highlights

- Deployed BR-CORE multilayer router running Cisco IOS 16.3.2 as the network core
- Configured OSPF process 1, Area 0, with manual Router-ID 60.60.60.60
- Established WAN edge on GigabitEthernet1/0/3 → 205.200.100.2/30
- Inter-branch links on 10.20.20.40/30 (GE1/0/1) and 10.20.20.44/30 (GE1/0/2)
- Enforced SSH-only VTY access (lines 0–4), exec-timeout 2 min, login local
- Applied service password-encryption globally; named-user authentication
- NTP client synchronised to 10.10.10.8 for network-wide time accuracy
- Centralised Syslog collection (10.10.10.7) for audit and event monitoring
- NetFlow export (version 9) configured for traffic visibility and analysis

Router Configuration — BR-CORE

The following annotated excerpts from the BR-CORE running configuration demonstrate applied expertise in enterprise Cisco IOS design, interface management, dynamic routing, and security hardening — all implemented and verified as part of the final project.

1. Device Identity & Security Baseline

```
! Cisco IOS 16.3.2
hostname BR-CORE
service password-encryption
enable secret 5 $1$mERr$Uw4QjlhEoz0R5q030u76Q1
ip domain-name we.com
username NetAdmin password 7 <encrypted>
```

2. Interface Configuration — WAN & Inter-Branch

```
interface GigabitEthernet1/0/1    ! Branch-1 uplink
no switchport
ip address 10.20.20.42 255.255.255.252
interface GigabitEthernet1/0/2    ! Branch-2 uplink
ip address 10.20.20.46 255.255.255.252
interface GigabitEthernet1/0/3    ! WAN edge
ip address 205.200.100.2 255.255.255.252
```

3. OSPF Dynamic Routing — Area 0

```
router ospf 1
router-id 60.60.60.60
log-adjacency-changes
network 205.200.100.0 0.0.0.3 area 0
network 10.20.20.40 0.0.0.3 area 0
network 10.20.20.44 0.0.0.3 area 0
```

4. Remote Access Security — SSH Only

```
line vty 0 4
exec-timeout 2 0
login local
transport input ssh    ! Telnet disabled
```

5. Network Management Services

```
ntp server 10.10.10.8      ! Time synchronisation
logging 10.10.10.7        ! Centralised Syslog
ip flow-export version 9   ! NetFlow analytics
spanning-tree mode pvst   ! Per-VLAN STP
```

Security Analysis

- **Credential Security:** Service password-encryption applied globally; enable secret uses MD5 type-5 hashing; VTY and console lines use encrypted local credentials.
- **Remote Access Control:** Telnet completely disabled on all VTY lines — SSH is the sole permitted management protocol, with a 2-minute idle timeout to prevent session hijacking.
- **Routing Integrity:** OSPF router-id is manually assigned to prevent non-deterministic adjacency formation; adjacency changes are logged for monitoring.
- **Operational Monitoring:** NTP ensures correlated log timestamps across all devices; centralised syslog enables forensic analysis; NetFlow v9 provides traffic baseline data.

Cybersecurity Knowledge & Examination Performance

The Networks and Information Security programme includes comprehensive cybersecurity modules assessed through formal written examinations. The content covers both theoretical frameworks and practical implementation, aligned with globally recognised standards such as NIST and ISO cybersecurity frameworks.

Cybersecurity Domains Mastered

- **Threat Landscape:** Classification of cyber attackers (Black/Grey/White Hat, Suicide Hackers, Cybercriminals); active vs. passive attack vectors; insider vs. external threats; malware taxonomy (virus, worm, ransomware, spyware, adware, Trojan Horse).
- **Cryptography:** Symmetric encryption (AES, DES, 3DES); asymmetric encryption (RSA, Diffie-Hellman, public-key infrastructure); hash functions (SHA, MD5); plaintext/ciphertext lifecycle; digital signatures and non-repudiation; substitution and transposition ciphers.
- **Network Security:** Firewall types (stateless packet-filter, stateful, NGFW, application-layer); IDS vs. IPS deployment; ACL design for router traffic control; SSH configuration; passive reconnaissance (nslookup, dig, host); social engineering awareness.
- **VPN & IPsec:** IPsec architecture; Transport Mode (original header preserved) vs. Tunnel Mode (new IP header added, additional encapsulation layer); VPN tunnelling concepts; site-to-site and remote-access VPN configurations.
- **Cloud & Virtualisation Security:** CIA Triad in cloud environments; data classification (transactional, intellectual property, financial); redundancy and high-availability designs; cloud migration risk assessment; Azure resource governance and access management.
- **Ethical Hacking & Governance:** Ethical hacker role and legal requirements; penetration testing methodology; cybersecurity policy design; NIST / ISO framework application; staff responsibility in security policies; cybersecurity audit objectives.

Formal Examination Models Completed

Model	Focus Area	Format
Model 1	Cybersecurity Threats & Cryptography	MCQ + True/False + Short Answer
Model 2	Ethical Hacking, IPsec & Cryptography	MCQ + True/False + Extended Answer
Model 3	InfoSec, CIA Triad, Encryption & Firewalls	MCQ + True/False + Short Answer
Model 4	Data Security, Malware, VPN & Firewalls	MCQ + Fill-in-blank + Extended

Cloud Computing & IT Projects

Microsoft Azure — Practical Laboratory

As part of the Microsoft Azure curriculum (Units 22 & 23), hands-on laboratory exercises were completed on the Azure portal, covering IaaS virtual machine deployment, region selection, and resource specification analysis.

Attribute	VM Configuration A	VM Configuration B
VM Size	Standard DS1 v2	NV72ads A10 v5 (GPU)
vCPUs	1	72
RAM	3.5 GiB	808 GiB
Temporary Storage	—	1,400 GiB
Region	East US	Central US
OS	Ubuntu Linux	Ubuntu Linux
Availability Zone	Zone 1 (single-zone)	Multi-zone capable
Use Case	General-purpose workload	GPU-accelerated / AI/ML

Key Cloud Concepts Applied

- IaaS vs. PaaS vs. SaaS service model differentiation
- Azure region and availability zone architecture for fault isolation
- VM family selection: general-purpose (DS-series) vs. GPU-optimised (NV-series)
- Resource lifecycle: provisioning → configuration → monitoring → decommission
- Redundancy design patterns for high-availability cloud deployments
- Cost-performance trade-offs in Azure VM SKU selection

IT Support & Infrastructure Management

- Hardware Diagnostics:** USB recognition failures, BSOD root-cause analysis, thermal management, display adapter issues.
- Performance Optimisation:** CPU overclocking, High-Performance power plans, BIOS updates, RAM XMP profiling, SSD migration.
- Network Connectivity:** IP configuration review, cable verification, DNS resolution, LAN/WAN fault isolation.
- Security & Endpoint:** Antivirus deployment, malware removal, scheduled scan policies, password hygiene, user access control.
- IT Infrastructure Design:** Full IT stack proposal for a food-service enterprise (SCOFF) — software, hardware, LAN, VPN, CRM/ERP, and IoT integration.
- Windows Server & AD:** Active Directory domain setup, Group Policy configuration, user and group management, remote access policies.

Statement of Purpose — International Study

My decision to seek higher education abroad is grounded in a clear understanding of where I want my career to go and how I can best get there. Three years of intensive, hands-on training in network engineering and cybersecurity have given me a strong technical foundation — but also a sharp awareness of the broader knowledge that an international academic environment uniquely provides.

Motivation for International Higher Education

- **Academic Excellence:** European and CIS universities consistently lead global rankings in Computer Science and Engineering research. Their emphasis on theoretical rigour combined with practical application directly complements my existing skills.
- **Research & Innovation Ecosystem:** I seek to participate in research communities where networking, cybersecurity, and cloud technologies intersect with cutting-edge academic inquiry.
- **Global Technical Perspective:** Technology is borderless. Studying alongside peers from diverse national and disciplinary backgrounds broadens one's approach to problem-solving.
- **Cultural Intelligence:** Living and studying in an international environment builds the cross-cultural communication skills essential for professionals working within multinational organisations and open-source technology communities.
- **Language & Professional Development:** An English-medium international programme will sharpen my professional English, while potential exposure to European languages will further expand my global professional reach.

Target Fields of Study

Priority	Field of Study	Rationale
1st Choice	Computer Networks & Cybersecurity	Direct extension of current expertise; CCNA-aligned; strong international demand
2nd Choice	Computer Science (Networks Specialisation)	Broader CS theory with networking focus; opens research pathways
3rd Choice	Information Systems / IT Management	Applied technology + organisational strategy; strong industry relevance

Commitment & Values

I bring a proven work ethic, a genuine intellectual curiosity for complex technical challenges, and the demonstrated ability to translate formal coursework into real project deliverables. My experience configuring and troubleshooting enterprise-grade Cisco networks, combined with my formal training in cybersecurity and cloud platforms, means I will contribute immediately and meaningfully to any international programme I join. I am committed to upholding academic integrity, embracing cultural diversity, and giving back to the institutions and communities that invest in my education.

Portfolio Summary & Contact

Complete Profile at a Glance

Full Name	Abdullah Eslam Abu Al-Futouh Abdul-Majeed
Institution	WE Applied Technology School — Nasr City, Cairo, Egypt
Programme	Networks & Information Security — Applied Technology Diploma
Graduation	2026 (Final Year)
Final Project	OnSite Enterprise Network — OSPF, SSH, NTP, Syslog (Cisco Packet Tracer)
Routing	OSPF Area 0, manual Router-ID, multi-interface, adjacency logging
Switching	STP-PVST, Inter-VLAN routing, VTP, EtherChannel, DHCP, Port Security
Security	SSH-only VTY, password-encryption, local AAA, ACLs, IPsec/VPN concepts
Cybersecurity	Cryptography (AES/RSA/DH), firewalls (NGFW/stateful), IDS/IPS, ethical hacking
Cloud	Microsoft Azure — VM deployment, availability zones, IaaS, high-availability design
Systems	Windows Server, Active Directory, Group Policy, IT Support
Simulation	Cisco Packet Tracer (advanced) · GNS3
Languages	Arabic (Native) · English (Professional Working Proficiency)
Target Study	BSc/MSc — Computer Networks, CS, or Information Systems (Europe / CIS)

Available From	June 2026 (upon graduation)

Declaration

I hereby certify that all information contained in this portfolio is accurate, truthful, and representative of my own academic work and achievements. This document has been prepared in good faith for the purpose of international university applications.

Abdullah Eslam Abu Al-Futouh — Applicant Signature

Date: June 2026

Supporting Documents & Certifications

The following two pages contain official supporting documentation referenced throughout this portfolio: verification of current enrollment status issued by WE Applied Technology School, and a certificate of appreciation recognising professional training completed outside the core curriculum.

Appendix Contents	
A	Certificate of Appreciation — HENGTONG Egypt Awarded for completing the Fiber Optic Technology Workshop, covering optical fiber fundamentals, direct-buried cable installation, air-blown fiber technology, and a factory visit / practical demonstration. Issued by HENGTONG Egypt, a subsidiary of HTGD (Hengtong Group). → See page 13
B	Official Enrollment Verification Letter Issued by WE Applied Technology School (Martyr Amr Mostafa Hosni Secondary), supervised by Egypt's Ministry of Education & Technical Education. Confirms current enrollment in the final year of the Network and Cybersecurity track, with all core courses, assessments, and examinations conducted entirely in English. Signed by School Principal Dr. Osama Fathy Bekheit. → See page 14

Note on language of instruction: The enrollment letter formally confirms that all core programme courses, assessments, and examinations are conducted entirely in English, directly satisfying the language-of-instruction requirements of international university applications.

Certificate of Appreciation

HENGTONG Egypt — Fiber Optic Technology Workshop

Figure — Certificate of Appreciation issued by HENGTONG Egypt for completing the Fiber Optic Technology Workshop.

About This Certificate

This Certificate of Appreciation was awarded by HENGTONG Egypt — a subsidiary of HTGD (Hengtong Group), one of the world's leading manufacturers of fiber optic cables and network infrastructure. The certificate recognises active participation and hands-on engagement in a professional training workshop covering advanced fiber optic technologies.

Workshop Topics Covered

- **Fundamentals of Optical Fibers & Cables:** Core principles of fiber optic transmission, signal propagation, attenuation, and cable structure types.
- **Installation of Direct-Buried Fiber Optic Cable:** Industry standards and field practices for underground fiber deployment, splice protection, and conduit systems.
- **Introduction to Air-Blown Fiber Technology & Construction:** Micro-duct infrastructure, compressed air installation techniques, and modular network expansion strategies.
- **Factory Visit & Practical Demonstration:** Live observation of fiber manufacturing processes and hands-on demonstration of cable testing equipment.

Relevance to Academic Profile: This workshop extends Abdullah's expertise beyond Cisco networking into physical layer infrastructure — a critical component of modern telecommunications and enterprise network design.

Official Enrollment Verification Letter

WE Applied Technology School — Ministry of Education, Egypt

Figure — Official enrollment letter issued by WE Applied Technology School, signed by School Principal Dr. Osama Fathy Bekheit.

Key Document Facts

Issuing Authority	WE Applied Technology School (Martyr Amr Mostafa Hosni Secondary)
Supervised by	Ministry of Education & Technical Education — Applied Technology Schools Unit
Student	Abdullah Eslam Aboelftoh
Track	Network and Cybersecurity — Final Year
Language of Instruction	English (core programme); Arabic (general education subjects only)
Expected Graduation	End of June 2026
Signed by	Dr. Osama Fathy Bekheit — School Principal

English-Medium Programme — Confirmed. The letter formally confirms that all core programme courses, assessments, and examinations are conducted entirely in English. This directly satisfies the language-of-instruction requirements of international university applications and demonstrates academic preparation in an English-medium technical environment.
